Coding Style Guide

Rules:
1) Follow Go programming guidelines.
2) Identation/Spacing, write clear names for variables and functions that describe what the function does.
3) Good amount of comments to explain what the function/variable does
4) Also use google guidelines for android development

Definition of done:

Code Submitted through pull request. Making unit tests where needed. Having a peer review code and accept it. Code needs to run and function.
